

Ambient Light Reflecting Tab Tensioned Projection Screen

Stunning vibrant image when viewed in daylight conditions.

*Designed for use with Ultra Short
Throw Projectors
(with the projector positioned under the screen).*

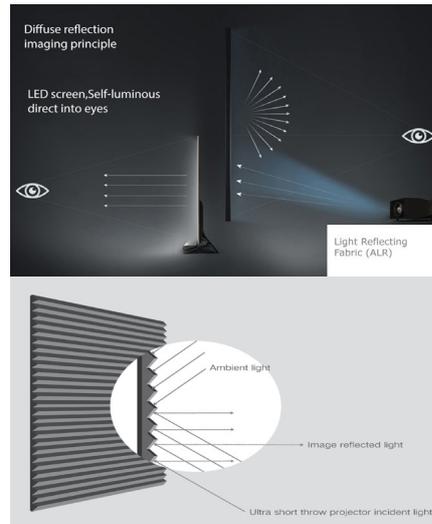

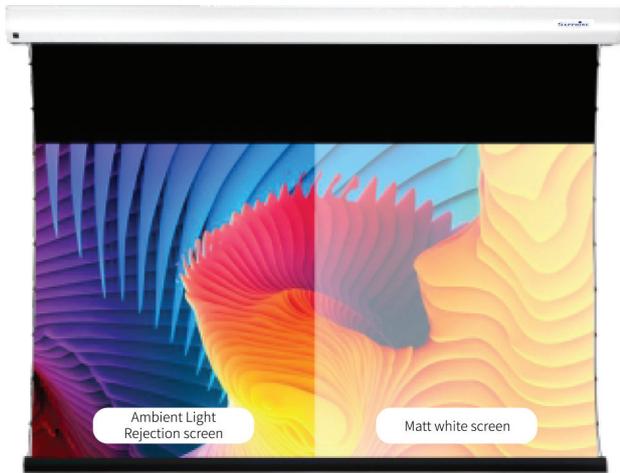

Designed and Manufactured with the same care and attention found on the other Sapphire Tab Tensioned range. Backed by a five year warranty your investment will be safe for years to come.

The tab tension screen ensures that the fabric is flat across the whole area as any slight imperfections really show on the short throw projectors.

Like most Sapphire screens it can be controlled by the supplied Infra red remote control, RS232, contact closure or 12V trigger (providing the projector has a 3.5mm 12V output). Alternatively you could use an STR optional accessory to automatically lower and raise the screen when the projector is turned on and off.

Ambient Light Resisting 4K Compatible Tab Tensioned Electric Projector Screen

Designed to be used with the new generation of smart ultra short throw projectors in daylight conditions and still have a vibrant colourful experience.

- With a wide 140 degree viewing angle
- Physical Anti-light structure on the surface of the fabric
- Supports 4K images
- 400mm top border on screen to bring the viewing area to the optimal level in modern houses.
- Projector must be at the base of the screen to work correctly.

How this Screen Works

- Ambient Light is reflected away from the image by a shape that stops the light hitting the area that the projector is using. The diagram above illustrates the fabric surface shape.
- The projector displays the image with a beam that is very steeply angled upwards. This is then reflected back into the room to make a clear, vibrant and captivating cinema like experience in your own home. Sitting to the side should not be an issue as the viewing angle is up to 140 degrees.
- Designed for a native 16:9 image it is ready for your content to be streamed and fill the screen with colour.

Product: SETTS221WSF-ALR			ALR high contrast fabric				(Measurement unit:mm)		
Aspect Ratio	Diagonal	Viewing Area (W×H)	Total Height	Total Length (L)	Black Drop	Gain	Viewing Angle	Color Reproduction

Easy Installation

Being channel fix you will not get an easier screen to install.

You have considerable flexibility to find the best fixing in your wall or ceiling. The power cable comes out of the left hand rear side of the screen and comes complete with a 2.7M cable and UK plug ready to plug into your 230 volt supply.
