# SAPPHIRE ELECTRIC PROJECTION SCREEN

Sapphire Projection Screens include infra-red or radio frequency remote.

The RF versions are also supplied with inline wall switch.

The screens are made with matte white fabric with a 1.1 gain for a smooth flat surface.

Multi-layered construction with fibreglass backing helps screen remains taut and prevents any V-waves from forming. The projection surface utilizes unique materials creating a smooth surface for superior image quality. The flexible projection surface is suitable for all occasions and ensures a color-rich reflection and sharp pictures.

The ATR range has an in-built trigger, there is a standard 10M lead to connect to your projector to automate the screen drop and retraction. This is the main difference between this and our other product. This product will also accept the optional RS232Switch so that you can control the actions via RS232 or via a computer with the software installed. This optional part also includes a wall switch although a RAD version would be a cheaper option as this has the wall switch included.

- This screen is supplied with a 2.7m power lead from the back left of the screen (when viewed from the front) and terminates in a standard UK power plug.

The Sapphire Mayfair range of projection screens are truly a work of art. We use only the best quality materials and each one is tested at length before leaving the factory.

- The screen fabric has black backing allowing you to place the screen in front of a window and no light will filter though the fabric.
- Fitting onto a plaster wall or ceiling is simplicity itself, thanks to the unique channel fix brackets. You will not find an easier screen to install
- The price of Sapphire Screens is comparable with many lower quality offerings. We put our faith in the product by offering a three year swap out warranty - this will give you complete piece of mind. Make sure you consider this important aspect before buying an inferior product.
